

The Danish Minister of Economic and Business Affairs, Brian Mikkelsen, visits FLUX A/S

Asnaes, Denmark, May 10th 2011

The Minister will in the near future present the Government's growth stimulus package and is therefore visiting a number of companies to get input to this growth package. Monday the 2nd of May, FLUX A/S in Asnaes had the great pleasure to welcome the Minister of Economics and Business Affairs.

FLUX A/S is a company in the absolute top, both in terms of growth and technology. About one third of its turnover comes from products to the European space industry, a market to which FLUX has supplied components since 1995. It is a segment imposing extremely high demands on precision and quality, not to mention the requirement of traceability of the materials used. In addition to this, FLUX provides components for a wide variety of industrial electronics applications. The company has experienced strong growth over the past decade and is geared for continued growth.

Among the issues discussed during the Minister's visit were the importance of continuously attracting qualified employees, the company's internal employee training programme, and the cooperation with educational and research institutions – in FLUX' case the DTU (Technical University of Denmark) and ESA (European Space Agency) – as well as with partners in the private sector. It was also mentioned that FLUX appreciates The Danish National Advanced Technology Foundation and also enjoys good cooperation with the local Business Council in Odsherred.

FLUX expressed its wish for clearer and more industry friendly guidelines regarding intellectual property rights (IPR) resulting from joint development with public institutions. Brian Mikkelsen promised to look into the issue.

But all in all an exciting morning at FLUX in Asnaes.
